

Agile Enterprise Development

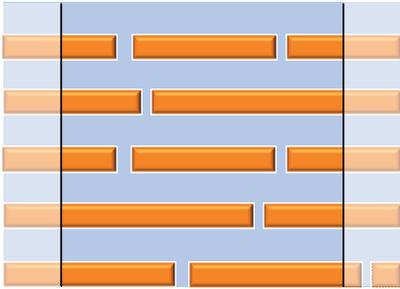

Are you ready for the next step?

Are you still increasing your company's profitability only by reducing costs?

- The project portfolio contains the potential to increase productivity by 40 %.
- Additional efficiency increases by 40 % are feasible for every single project.
- By combining both approaches, it becomes possible to double productivity.

Do you think our calculations are off?
Let us convince you!

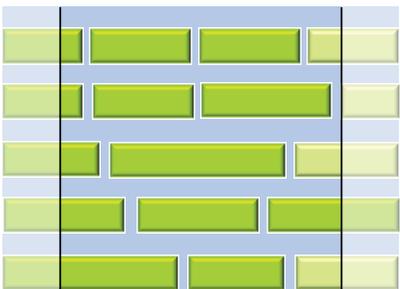

Projects are still failing

More than 75 % of all projects worldwide are failing in terms of needed time, budget or goal fulfillment, and this despite the fact that the affected companies usually have detailed planning and implementation processes.

But regardless of how well-considered your plans are, it isn't possible to completely exclude all risks and uncertainties. The world doesn't stop when the plans are finished. The customer's demands and requirements still change. The traditional established processes will not help you to move forward here. Productivity is wasted.

Someone who tries to drop expenses at a time like this might as well get ready to drop the entire company soon.

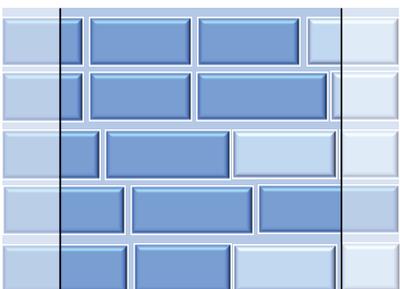

Portfolio stabilization

With a synchronized portfolio, you can achieve a company stability that will enable the efficient and effective handling of the projects.

"The projects no longer stand in each other's way."

A company's efficiency can easily be increased by 40 % by stabilizing and synchronizing the portfolio. Use the increase in efficiency to complete more projects in the same amount of time and with the same use of resources. Project runtimes with the same content are reduced by 30 %.

Faster and better projects

Due to an iterative, incremental approach, each individual project can receive another 40 % in efficiency in an already stabilized portfolio. At that point it will be your decision whether you want to use the additionally gained efficiency towards another reduction of the project runtime, or whether you would like to offer your customer more content in the same time period.

Agile Enterprise Development

The respective efficiency increase potentials are integrated into the combination of a stabilized portfolio and individual agile projects as a product. Agile Enterprise Development (AED) thus represents a doubling of the efficiency in the project business.

What would it mean for your company if the productivity is doubled while the operating costs stay the same?

Why syracom ?

- Our long-term experience as a company advisor gives you the assurance that we will reach your goals together.
- From the strategic up to the operative level, we know and understand all levels of a modern company.
- As an organizational advisor, we know where and how people might react with resistance and how to bring them over to our side. If everyone pulls on the same rope, great things can be moved forward.
- What matters to us are not our methods but your concerns. We create individual solutions that will take you further.
- We count on long-term partnerships with our customers. Your satisfaction and your trust in us is what counts.
- We already enjoy what we do. With a positive attitude, we can rouse and convince.

What might our collaboration look like?

A high level of mutual trust is the basis of good advice. It takes time to build up trust. For that reason we offer you the opportunity to get to know us step by step and build up your trust in us and our services.

The initial discussion will familiarize you with the main features of AED. We talk with you about your individual starting position and identify possible spheres of activity. Of course you will not be charged for this.

Depending on the results of our first discussion, we will jointly define the next steps. Together with selected staff members of your company, we will address the identified spheres of activity in workshops and seminars.

Here you will get to know the tools and methods used by AED, which will enable your first steps on the way to an improved project flow. As a result of this phase, you will receive an image of your organization's key objectives along with a concrete implementation schedule.

If you decide to take this path with us, you can assign us to implement the AED. Then we will decide together how and in which form we will become active for you – we will advise, coach, accompany and support you during the implementation of concrete measures. Whether as a consultant, coach, agent or project manager.

Your standards, our mission – with trust and assurance we will reach success.

According to a Chinese saying, "You have to take small steps if you want to reach the goal." Assure the success of your future projects now by contacting us via phone or email!

business efficiency engineering

for excellent business process

syracom is an owner-run business and IT consultancy specializing in the development of bespoke software solutions for midsize and large companies. We streamline our customers' business processes, and help them master the digital transformation of their value chains: business efficiency engineering for sustainable success.

We see ourselves as partners to clients who consider a longstanding working relationship more relevant than quick but minor benefits. Established in 1998, **syracom** forms part of the Consileon group of companies.
