

## Robotic Process Automation (RPA)

Say goodbye to time-intensive, error-prone and repetitive manual tasks. RPA – your virtual software robot – will handle them for you. It mimics human interactions and gives your employees the freedom to dedicate themselves to value-adding tasks – 24/7!

RPA handles rule-based, repetitive tasks and processes for you without having to interfere in your existing IT systems and interfaces. RPA can be used in nearly all areas of your company.

### Selection of possible use cases

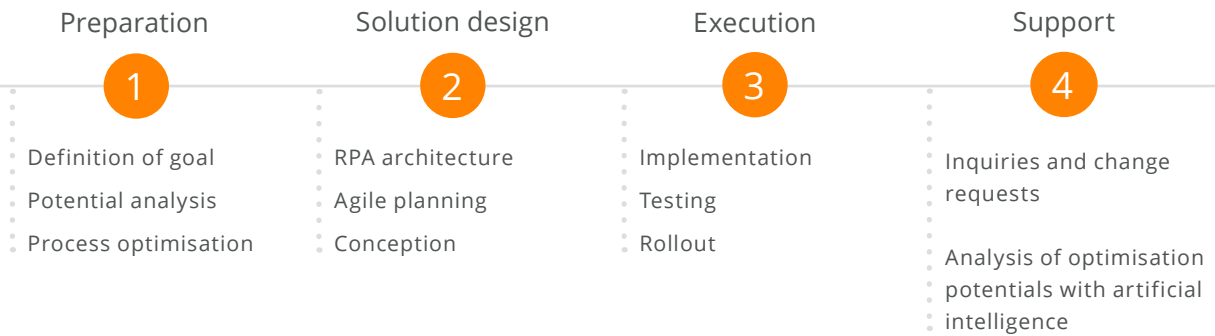

### Success factors

- Selection of suitable processes
- Performing feasibility study
- Integrating IT area
- Transparent communication and change management
- Creation of RPA governance

### Your benefits

- Short payback period (ROI)
- Flexible scalability
- Reduction of activities that don't add value
- Increase in productivity (24/7 operations)
- Decrease in processing errors
- Improvement of data and process quality
- Reduction of time and effort
- Increase in employee and customer satisfaction
